

Remarkable Apps for Reliable Networks

The VisNet® Reliability App Suite delivers the support you and your network need. Faster identification and resolution of issues through real-time monitoring, alerts for loss of supply and pre-fault activity, as well as fault type and its exact location. Just think what you could do with this information.

Did you know that you can get **highly accurate predictions** of when and **where cable faults will occur?**

Most LV faults are located using VisNet reliability apps? How would this benefit your customers this winter?

We predicted 71% of LV faults which subsequently occurred within a year?

120 minutes

Did you know starting restoration immediately after a fault **can reduce CML by 120 mins?** No need to wait for customer calls. How would this benefit your customers this winter?

Our Proactive Reliability App typically locates the exact position of an LV cable defect 32% of the time, to within 5m in 49% of cases and 59% of the time to within 10m.

Did you know?

80% of faults are from 20% of LV circuits?

We can tell you which ones.

Knowing fault locations before hand can shorten restoration & repair time by 30% and cut CML costs by 40%. What would you do with these monetary savings?
